

FRE

Automatic capacitor banks with detuned filters and thyristors

Description

The capacitor banks with detuned filters of the **FRE** series have been designed for reactive energy correction in networks with fluctuating load levels, high harmonic presence and a risk of resonance.

The power variations are relatively quick (measured in milliseconds), and the operation is thus carried out by thyristors, which are connected to a voltage controller board, so that the connection and disconnection of the capacitor is carried out with zero voltage difference. Transients are prevented between the connection and disconnection of the steps, obtaining an immediate response to the load fluctuations.

Applications

The most common application is with individual loads or in installations where a quick compensation response is needed (e.g. welding units, motors for lifting units, lifts, etc.) and where the network has high harmonic content.

Technical features

Electrical features	Operating voltage Support voltage Capacity tolerance Tr connection delay	230, 400 V (for other voltages, please ask) 440 V (400 V) ± 10% 40 ms...2 s
Unit made up of	CFB capacitor Static switching unit on each stage, made up of static contactors (thyristors) Protection by stage by fuses with high cut-off power (APR). NH-00 series. Two-pole circuit breaker protection for capacitor bank and regulator operations. Reactive energy regulator of the Computer MAX-f Heatsinks Built-in thermostat on the heatsink for disconnecting the stage in the case of excessive temperatures (90 °C) Detuned filters tuned to 189 Hz for protection against harmonics present in the network and for preventing resonance with harmonics of the 5th order or higher.	
Add-ons	Manual switch on capacitor bank header Circuit breaker on capacitor bank header Circuit breaker + earth leakage protection on capacitor bank header Forced ventilation unit + thermostat Polycarbonate sheet for protection against direct contacts 400/230 V autotransformer	
Insulation level	3 / 15 kV	
Discharge resistance	75 V / 3 minutes	
Overload	1.3 times the nominal hold current	
Oversupply	10%, 8 over 24 hours 15%, up to 15 minutes over 24 hours 20%, up to 5 minutes over 24 hours 30%, up to 1 minute over 24 hours	
Environmental features	Temperature class D Humidity Altitude	Daily mean: 45 °C Annual mean: 35 °C Maximum: 50 °C Minimum: -25 °C 80% RH 2,000 m
Mechanical features	Protection degree Colour	IP 21 RAL 7035 grey RAL 3005 maroon
Assembly conditions	Type of assembly Ventilation	Vertical Natural or forced, in accordance with the options
Standards	Distance between capacitors	At least 2 cm
		IEC 60831-1, IEC 70/7, UNE 20827, UNE 20010, BS 1650, VDE 560
