

CVM BDM

Three-phase power analyzer(balanced and unbalanced) for DIN rail mounting, with internal 1 MB memory

Description

Three-phase power analyzer(balanced and unbalanced) for its assembly on DIN rails, with internal 1 MB memory, measuring in 4 quadrants.

Other features include:

- Current measuring .../5 A
- Measuring of active (kW·h) and reactive (kvarh) energy consumed and generated, both capacitive and inductive. (4 quadrants)
- 8 module DIN rail format
- Adjustable dual kW/MW scale
- Calculates the flicker per phase
- RS-485 communications with Modbus RTU and Zmodem protocol to download files
- Optional second RS-485 port to connect I/O peripherals
- ITF Technology: galvanic insulation protection inputs, depending on the type
- Default page selection
- Optional use of rates with RED or RED-MAX modules

Application

- Application for the control of switchboards and low and medium voltage connection points, where an analyzer must be installed on the DIN rail
- Control of instantaneous, maximum and minimum values of the electrical parameters metered
- Applications where the analyzer's memory must store the electrical parameters measured.
